## FUY Total:

I affirm that the information given is correct. I acknowledge that the approval given for minimum meter size and maximum water capacity is based solely on the information provided above, and such determination is at the discretion of the Pagosa Area Water and Sanitation District. Any deviation under construction will require resubmission of corrected data for determination of adequacy of meter size.

Instructions for completion of the PAWSD Commercial \& Multi-Dwelling Water Meter Sizing Worksheet

Matrix to Determine Meter Size and Water Demand
Complete the columns of the matrix by supplying the quantity and type of fixtures. Accuracy of the fixture count is necessary to determine the appropriate meter size and Equivalent Units.

## Commercial Use

Applies to business, commercial, industrial, and assembly occupancies. Included are the public and common areas in hotels, restaurants, schools, churches, etc.

## Multi-Dwelling Use

May apply to duplex, apartments, condos, townhomes, etc.

## Other Water Requirements

There are some process water demands that are not listed, such as car washes. Each of these will be assigned a fixture unit count based upon its GPM demand. Make sure this information is provided.

## Lawn Sprinkler Heads

Add all $1 / 4,1 / 2,3 / 4$, and full irrigation heads to determine the total number of full sprinkler heads. For example, two $1 / 4$ heads and one $1 / 2$ head will equal one full head.

## GPM (Gallons per Minute)

When any water requirement is listed by GPM demand, fixture unit count will be determined by using the 2015 International Plumbing Code Table E103.3(3) - Table For Estimating Demand.

## 2023 MULTI-DWELLING ACCOUNTS
